

JACKIE CHEN

San Francisco, CA | 415-528-0047 | jackiechen246@gmail.com | linkedin.com/in/jackiewchen | jackiewchen.github.io

EDUCATION

University of California, Santa Barbara

B.S. in Computer Science

Santa Barbara, CA

Sept. 2022 – Jun. 2026

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Databases, Computer Graphics

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C, C++, Swift, SQL, HTML/CSS

Frontend/Mobile: React, React Native, Expo, React Navigation, React Query, Axios, Storybook

APIs/Cloud/Data: REST APIs, Firebase Auth, Firestore, Spring Boot, Node.js, PostgreSQL

Tools/Testing: Git/GitHub, Docker, GitHub Actions, Jest, JUnit, React Testing Library

EXPERIENCE

Waymo

San Francisco, CA

Project Management and UX/UI Intern

Jun. 2024 – Aug. 2024

- Built a front-end informational website using HTML, CSS, and JavaScript to present research findings, product strategy, and UX recommendations for a proposed autonomous vehicle service in San Diego.
- Developed a business proposal and product model by combining market research, user needs, and deployment considerations into recommendations for the proposed service.
- Led and coordinated a team of 20+ peers by organizing project tasks, facilitating collaboration, and presenting final recommendations.

Google Computer Science Summer Institute

Remote

CSSI Scholar

Jul. 2022 – Aug. 2022

- Completed a 4-week project-based computer science program covering JavaScript, HTML/CSS, APIs, product design, and software engineering fundamentals.
- Built and presented a collaborative web application using JavaScript, Canvas API, Bulma, and the GIPHY API.
- Participated in technical workshops led by Google engineers on software engineering, artificial intelligence, resume development, and interview preparation.

PROJECTS

Split-It Mobile Expense App | React Native, TypeScript, Expo, Firebase, Jest

- Built core React Native workflows for navigation, group management, profiles, and camera scanning in an Android expense-sharing MVP.
- Implemented editable group settings, responsive mobile UI components, and user-facing app screens while collaborating with a seven-person team using Git and GitHub.
- Integrated Firebase Authentication and Firestore-backed data flows, then tested mobile app functionality with Jest and React Native Testing Library.

UCSB Courses Search | React, Java, Spring Boot, REST APIs, PostgreSQL, Docker

- Developed React components and schedule-management features for a deployed UCSB course-search app backed by Java Spring Boot REST APIs.
- Integrated frontend API workflows with React Query and Axios and added test coverage using Jest, React Testing Library, and Storybook.
- Worked in a GitHub Actions and Docker-based CI/CD workflow with JUnit, JaCoCo, and mutation testing to validate frontend and backend changes.

Rendering Pipeline & Physics Simulation | C++, Ray Tracing, Rasterization, BVH

- Implemented coordinate transformations, triangle rasterization, z-buffering, ray-triangle intersection, and bounding-box calculations in C++.
- Built ray-based mesh rendering with midpoint and surface-area-heuristic BVH construction to accelerate intersection testing.
- Simulated mass-spring systems using Euler and Verlet integration and rendered the results through a custom C++ graphics pipeline.
